

## EDITORIAL

During 2017, publishing in Contributions of the Astronomical Observatory Skalnaté Pleso (CAOSP) has followed new bylaw of the journal (see Editorial from January 2, 2017 in the issue 47/1). In May 2017 a new face of the CAOSP web-site was completed. Now all necessary information are displayed concisely, being seen at first glance, but with possibility to select easily any required item in detail. You can judge it yourself at <https://www.astro.sk/caosp/caosp.php>. To disseminate these changes to a wider astronomical community, we sent a short informative e-mail to about 160 addresses of potential authors to attract their attention for publishing in CAOSP.

During 2017 we completed 2 issues. Volume 47/1 contains regular papers. Our colleagues, Neslušan, L., Tomko, D. and Ivanova, O., explored the chaotic orbit of the comet 29P/Schwassmann-Wachmann 1. They found that the comet will be probably ejected from its current inner Solar System location to the interstellar space on the time-scale of hundreds of thousands years. Colleagues from Poland, Olech, A. et al., devoted their work to the PF120916 Piecki fireball. Determining its orbit, they suggested fall of meteorites south of Reszel city. Finally, Volkov, I.M., et al. investigated orbital changes of three southern eclipsing Algol-type binaries (RW CrA, DX Vel, V0646 Cen). They revealed a long-term variation in the orbital inclination for RW CrA and DX Vel due to non-coplanar orientation of their third body orbits.

Volume 47/2 presents contributions from the workshop on high-energy astrophysics: "14th INTEGRAL/BART Workshop", held in Karlovy Vary, April 3–7, 2017. Due to an effective co-operation between editors of both workshop proceedings and CAOSP, all the accepted contributions (22 from 36) were published already in June 2017 in electronic form, while the printed version was available in August 2017.

To date, there are two additional suggestions for publishing contributions from international conferences as special issue of the journal CAOSP.

Some minor changes have been implemented to the CAOSP L<sup>A</sup>T<sub>E</sub>X documentclass and bibTeX, resulting in a slightly modified format of the references.
