TO WHOM IT MAY CONCERN

I am pleased to write this letter of recommendation for Muhammad Mubashir Israr, whom I have known since September 2018. Over the years, I have had the opportunity to teach him in multiple subjects at both the undergraduate and master's levels. Additionally, he completed his research work under my supervision, focusing on "Theoretical Modelling on Vortex Dynamics in Jupiter and Saturn Atmospheres."

During my time working with Muhammad Mubashir Israr, I have found him to be a diligent, motivated, and intellectually curious student. His grasp of complex theoretical concepts and his ability to apply them effectively in research have been truly commendable. His work on vortex modeling demonstrated not only his strong analytical skills but also his ability to approach problems with a systematic and innovative mindset.

Beyond academics, Muhammad possesses excellent problem-solving abilities and a keen interest in advancing knowledge in his field. His dedication to his research, combined with his ability to work independently as well as collaboratively, makes him an outstanding candidate for further academic or professional opportunities.

I strongly recommend Muhammad Mubashir Israr for PhD program he wishes to pursue. I am confident that he will excel in any academic or research setting and make valuable contributions to the field. Please feel free to contact me if you require any further information.

DR. RIZWAN AKRAM
Associate Professor
Department of Physics
Air University Islamabad
